**NOTIFICATION IMPORTANTE**

Date du dépôt international (jour/mois/année)  
05 octobre 2004 (05.10.2004)

Déposant

COMMISSARIAT A L'ENERGIE ATOMIQUE etc

**1. Transmission de la traduction au déposant.**

Le Bureau international transmet ci-joint copie de la traduction en langue anglaise du rapport préliminaire international sur la brevetabilité (chapitre I).

Le Bureau international transmet ci-joint copie de la traduction en langue anglaise du rapport préliminaire international sur la brevetabilité (chapitre II).

**2. Transmission d'une copie de la traduction aux offices désignés ou élus.**

Le Bureau international notifie au déposant qu'une copie de cette traduction a été transmise aux offices désignés ou élus suivants qui exigent la traduction en question:

KR

Les offices désignés ou élus suivants ayant renoncé à l'exigence selon laquelle la transmission doit être effectuée à cette date recevront une copie de cette traduction du Bureau international seulement à leur demande:

AE, AG, AL, AM, AP, AT, AU, AZ, BA, BB, BG, BR, BW, BY, BZ, CA, CH, CN, CO, CR, CU, CZ, DE, DK, DM, DZ, EA, EC, EE, EG, EP, ES, FI, GB, GD, GE, GH, GM, HR, HU, ID, IL, IN, IS, JP, KE, KG, KP, KZ, LC, LK, LR, LS, LT, LU, LV, MA, MD, MG, MK, MN, MW, MX, MZ, NA, NI, NO, NZ, OA, OM, PG, PH, PL, PT, RO, RU, SC, SD, SE, SG, SK, SL, SY, TJ, TM, TN, TR, TT, TZ, UA, UG, US, UZ, VC, VN, YU, ZA, ZM, ZW

**3. Rappel concernant la traduction dans la ou l'une des langues officielles de l'office ou des offices élus.**

Il est rappelé au déposant que, lorsqu'une traduction de la demande internationale doit être remise à un office élu, cette traduction doit comporter la traduction de toute annexe du rapport préliminaire international sur la brevetabilité (chapitre II).

Il appartient au déposant d'établir la traduction en question et de la remettre directement à chaque office élu intéressé dans le délai applicable (règle 74.1). Voir le volume II du *Guide du déposant du PCT* pour de plus amples renseignements.

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FR2004/050483

## Box No. I Basis of the report

1. With regard to the language, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.

This report is based on translations from the original language into the following language \_\_\_\_\_ which is the language of a translation furnished for the purposes of:

international search (Rule 12.3 and 23.1(b))  
 publication of the international application (Rule 12.4)  
 international preliminary examination (Rule 55.2 and/or 55.3)

2. With regard to the elements of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report):

the international application as originally filed/furnished  
 the description:  
 pages 1-32 as originally filed/furnished  
 pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_  
 pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

the claims:  
 nos. 1-17 as originally filed/furnished  
 nos.\* \_\_\_\_\_ as amended (together with any statement) under Article 19  
 nos.\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_  
 nos.\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

the drawings:  
 sheets 1/2, 2/2 as originally filed/furnished  
 sheets\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_  
 sheets\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

a sequence listing and/or any related table(s) – see Supplemental Box Relating to Sequence Listing.

3.  The amendments have resulted in the cancellation of:

the description, pages \_\_\_\_\_  
 the claims, nos. \_\_\_\_\_  
 the drawings, sheets/figs \_\_\_\_\_  
 the sequence listing (specify): \_\_\_\_\_  
 any table(s) related to sequence listing (specify): \_\_\_\_\_

4.  This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).

the description, pages \_\_\_\_\_  
 the claims, nos. \_\_\_\_\_  
 the drawings, sheets/figs \_\_\_\_\_  
 the sequence listing (specify): \_\_\_\_\_  
 any table(s) related to sequence listing (specify): \_\_\_\_\_

\* If item 4 applies, some or all of those sheets may be marked "superseded."

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FR2004/050483

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

## 1. Statement

Novelty (N)	Claims	<u>1-17</u>	YES
	Claims		NO
Inventive step (IS)	Claims	<u>4-7, 9</u>	YES
	Claims	<u>1-3, 8, 10-17</u>	NO
Industrial applicability (IA)	Claims	<u>1-17</u>	YES
	Claims		NO

## 2. Citations and explanations (Rule 70.7)

Reference is made to the following documents:

D1: FR-A1-2 738 076;

D2: WO-A1-00/49621.

1. The present application does not fulfil the requirements set forth in PCT Article 33(1) because the subject matter of claim 1 does not involve an inventive step as defined in PCT Article 33(3).
  
- 1.1 Document D1, which is considered to be the prior art closest to the subject matter of claim 1, describes (see page 5, line 1 to page 6, line 15; the references between parentheses apply to said document):
  - a method for producing nuclear fuel pellets based on uranium and plutonium mixed oxides and having a specific plutonium content, which method includes the following steps:
    - (a) preparing, by means of combined milling, a primary mixture of powders having a

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

plutonium content higher than said specific plutonium content (page 5, steps (a) and (b));  
(b) sieving the milled mixture (page 5, step (c));  
(c) preparing a final mixture of powders having said specific plutonium content by mixing the sieved material with a  $UO_2$  powder (page 5, step (d));  
(d) pelletting (page 5, step (e));  
(e) sintering (page 5, step (e)); and  
(f) during step (a), adding an organic sulphur-containing material.

1.2 The subject matter of claim 1 differs from this known production method in that at least one compound selected from chromium, aluminium, titanium, vanadium, magnesium and niobium oxides (and the precursors thereof) or inorganic sulphur-containing compounds is added to the primary mixture during step (a).

1.3 The problem that the present invention is intended to solve can be considered to be that of reducing, in pellets produced using a MIMAS-type production method, the release of fission gases from the uranium/plutonium mixed oxide fuel pellets (MOX pellets) caused by the non-uniform distribution of  $(U/Pu)O_2$  clusters within the  $UO_2$  matrix (see the description, page 8, lines 17-25).

1.4 The solution proposed by the present invention is

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FR2004/050483

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

to include a specific oxide or an inorganic sulphur-containing compound in the primary powder mixture.

1.5 The solution proposed in claim 1 of the present application is not considered to be inventive under the terms of PCT Article 33(3), for the following reasons:

The addition of specific oxides or inorganic sulphur compounds increases the density distribution of plutonium (or thorium) as well as the grain size thereof (see the description, page 11, lines 13-19) and this is conducive to the retention of fission gas.

It is, however, routine practice to add oxides, in particular, chromium, aluminium, magnesium, titanium, niobium and vanadium oxides, to the uranium/plutonium or uranium/thorium oxide mixture during the production of MOX fuels, as is recognised by the applicant (see the description, page 10, line 25 to page 11, line 3). Document D2, in particular, describes (see the whole document) the addition of the aforementioned oxides to the primary mixture in order to produce a fuel that has a larger grain size and is thus capable of increasing fission gas retention.

On the basis of the production method in document D1, it would, therefore, be obvious for a person skilled in the art seeking to solve the

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FR2004/050483

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
	following reasons:

None of the prior art documents suggests the addition of an inorganic sulphur-containing compound to the primary mixture of uranium/plutonium (or uranium/thorium) oxides.

6. The present examiner acknowledges that examples 1-5 in the application demonstrate that the addition of chromium to the pellets leads to a substantial increase in grain size during the plutonium (or thorium) phase compared with the grain size during the uranium phase.

This effect does not, however, appear to be the main aim of the invention. According to the description (see page 6, lines 20-29 and page 8, lines 17-25), the invention is merely intended to enhance the distribution of plutonium clusters within the  $UO_2$  matrix and thereby reduce the release of fission gases. Similarly, in the preamble of claim 1, the aim is merely to produce nuclear fuel pellets containing mixed oxides and "... having a specific plutonium or thorium content" and no reference is made to the grain size.

Upon reading D2, which achieves the same result of reducing the release of fission gases by increasing the grain size of the fuel by adding  $Cr_2O_3$ , a person skilled in the art would have no need whatsoever to compare the differential grain size growth during the plutonium phase with that

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FR2004/050483

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement.

during the uranium phase in order to use the teaching of said document D2, with a corresponding effect, in the method of D1 and thereby arrive at the production method as per claim 1.

It follows that, in light of D2, the objection with respect to the inventive step of claim 1 could apparently be dispelled during a national or regional phase if claim 1 were worded differently, for example "... having a specific plutonium or thorium content *and a mean grain size during the plutonium or thorium phase that is greater than that during the uranium phase*, which method includes ..."
